

*Cont
B'*

diluting with water using from about 0.1% to about 5% of the concentrated composition, by weight of the dilute treatment composition, said concentrated composition comprising:

- (a) from about 0.5% to about 25% by weight of toxicologically-acceptable detergent surfactant selected from the group consisting of alkyl sulfates and C₈-C₁₄ soaps;
- (b) a basic buffer to provide a pH in said dilute treatment composition of from about 11.3 to about 12.3, but with low reserve alkalinity in said dilute composition to avoid damage to a human, the level of orthophosphate, when present, being from about 3% to about 60%, by weight of phosphoric acid equivalent;
- (c) from about 2% to about 20% by weight of a calcium ion sequestrant, which is sodium and/or potassium tripolyphosphate and/or ethylenediaminetetraacetate;
- (d) optionally, a toxicologically-acceptable preservative;
- (e) a toxicologically-acceptable suds suppressor; and
- (f) the balance comprising compatible, toxicologically-acceptable inert and/or minor ingredients.

15. (amended) A dilute treatment composition prepared by diluting from about 0.5% to about 2% by weight of the composition of Claim 14 with impure water to form a composition which has a viscosity less than about 10 centipoise under shear of greater than about 1000 sec⁻¹.
